15. (Original) A method of assembling a wound film dispenser, comprising the

steps of:

folding a pre-formed blank into a tube having first and second open ends;

inserting a roll of wound film into the tube through one of the first and second open ends;

folding retainer plies into the first and second open ends, the retainer plies each having first and second retainer flaps hinged thereto;

folding a major flap against each of the retainer plies, each major flap having a locking flap hinged thereto; and

pushing each locking flap inward through one of the retainer plies, each locking flap frictionally engaging the retainer flaps of one of the retainer plies, the locking flaps and retainer flaps penetrating first and second hollow ends of the roll.

16. (Original) The method of claim 15, wherein each of the first and second retainer flaps include notches which receive sides of one of the locking flaps during the pushing step.

17. (Original) The method of claim 15, wherein the first and second retainer flaps are hinged vertically and the locking flaps are hinged horizontally.

18. (Original) The method of claim 15, further including the step of folding a minor flap against each of the major flaps after the pushing step.

19. (Original) The method of claim 15, wherein the blank is pre-formed by die-cutting.
